QUICK READ · FRAUD & IDENTITY

Mike · Client Success Manager, **SIGNiX**

Hi «FIRST_NAME»,

If you skim, start here

Why you are hearing from me: I am your **SIGNiX** partner for client success. Risk and regulators keep asking for **layered assurance at consent**, which is what we help you deliver.

What is below: Three quick links. Each has a short **Mike's use** line so you see the SIGNiX tie-in fast.

Want help? Reply with **your top three transaction types**. I will point to where authentication usually pays off. No obligation.

Fraud is moving faster and looks more **engineered** than even a year ago. The same theme keeps coming from regulators: prove **layered authentication** across the identity lifecycle, not one-and-done checks. Here are three reads my clients are forwarding internally this month.

1. U.S. fraud and identity theft losses topped $12.7 billion in 2024 (Experian / FTC data)

Scale of reported fraud and ID theft. **Mike's use:** backs **layered verification** when you brief risk or compliance.

2. Identity Fraud Report 2025-2026 (Sumsub)

Sophisticated, multi-step fraud trends. **Mike's use:** shows why teams move past SMS or email-only to **adaptive authentication** with **SIGNiX**.

3. How to recognize and avoid phishing scams (FTC)

Short, credible phishing primer. **Mike's use:** easy **staff training** to pair with your **SIGNiX** rollout.

FOR IT OR COMPLIANCE
SIGNiX Flex API capabilities (authentication paths and technical overview).

The gap I still see most is **weak identity assurance at consent**, not missing the nightly news. **SIGNiX** is how my clients add layered authentication without turning every transaction into a project. Want a second opinion? Tell me your **top three transaction types** and I will suggest where a control step usually lands. No obligation.

Thanks for the partnership,

Mike
Client Success Manager, SIGNiX
