AMERICAN BANK SYSTEMS
COPILOT® · INTEGRATED LOAN AND DEPOSIT PLATFORM

FOR INSTITUTIONS ADOPTING OR EXPANDING ABS COPILOT

Authentication that matches transaction risk in your CoPilot workflow.

Your ABS team already understands your institution. SIGNiX extends that relationship with layered authentication choices so you can raise identity assurance where risk is highest while keeping lower-risk steps efficient for staff and customers.

IDENTITY FRAUD PRESSURE IS INCREASING

- AI-enabled synthetic identities, impersonation, and stronger phishing are increasing onboarding and access risk.[1]
- Identity misuse and account takeover trends are pushing institutions toward layered, higher-assurance controls.[1][2]

SIGNiX authentication options

- **Email-only** for low-risk use cases.[3]
- **SMS OTP** for convenient step-up access control.[2][3]
- **KBA** for higher-assurance remote checks.[2][3]
- **ID Verify** for credential analysis plus biometric liveness/facial checks.[2][4]

Benefits for ABS CoPilot customers

- Apply authentication strength by transaction risk, not one method everywhere.
- Reduce identity-misuse exposure while preserving front-line throughput.
- Support exam readiness with clearer, repeatable controls and evidence.

PRACTICAL RISK GUIDANCE FOR COPILOT TEAMS

Use lower-friction methods for routine interactions, step up to SMS OTP/KBA for moderate exposure, and apply ID Verify (credential analysis + biometrics) for loans, account opening, and high-value actions.[2][3][4]
